LaserTape™ Sandblastable Laser Mask

LaserTape allows you to use a laser engraver machine in correlation with a sandblast machine to create low-cost stencils. LaserTape conforms beautifully to surfaces without wrinkling, burns clean and peels easily making for an effortless removal. LaserTape contains NO PVC, which can damage laser components and subject operators to harmful, noxious fumes. Furthermore, LaserTape can be colorfilled after sandblasting, providing additional value to the final piece. Whether you're producing high-end corporate awards, promotional products or giftware, LaserTape is the perfect fit for your laser engraving operation.

How it works... Begin by applying LaserTape sandblastable laser mask to substrate with a squeegee removing air bubbles and wrinkles. After removing the polyester carrier, laser through LaserTape to create your sandblastable mask. Finally, sandblast your substrate to required depth and colorfill if desired. It's that simple!

Available in 4 mil thickness, LaserTape can be purchased in a variety of formats.

IKONICS Imaging is proud to bring innovative and affordable products to the sandcarving industry.
