

## Ultra Black™ Toner Enhancement Spray

- Darkens Toner
- No Residue
- Dries in Minutes

If your printer doesn't print dark enough for quality positives or negatives, try lightly spraying the printed page with Casey's Ultra Black to darken the laser printer output. This will dissolve the toner and cause the toner particles to "fuse" together, making the black toner more opaque. Ultra Black is virtually invisible, leaving no residue and it only effects the toner areas.
